Abstract

This paper clarifies the effect of gravitational waves on the oceans and clarifies the causes of water becoming carbon.

Introduction:-

The universe is the relative balance of the rotating and rotating planets. Planetary rotation produces gravitational waves[1]. Gravitational waves are electronic waves. For a long time the role of gravitational waves, through the entanglement and deposition between electrons, formed the material[2]. Atomic weight and molecular weight also gradually increased. Earth is also through the gas, liquid, solid and other forms of development. Jade and diamonds are fossils of ice. The difference is that jade is a fossil of non-metallic structures of ice. Diamond is a fossil metal structure of ice. This paper describes the effect of gravitational waves on the ocean.[4,6]

Theoretical preparation:-

Theorem 1 (Gravitational waves existence theory) [3,4,5,6,7,8,9,13].

There are A, B two points. A is the wave source of gravitational field, and B is a point in the gravitational field. The existence of energy rotational motion (including proton, neutron, atomic nucleus or planet) at A is the necessary and sufficient condition of the existence of gravitational waves at B. Direction is the bidirection of the path tangent at point B, and the limit of the convergence direction is A point.

Theorem 2 (Gravitational wave stability theory)[3,4,5,6,7,8,9,13].

A is a gravitational wave source, B is a point in gravitational field of A. The necessary and sufficient conditions of stable gravitational wave at B point are:

$$dr / d\theta = b, \text{ (b is a constant). } \leftarrow \text{modified}$$

Inference of theorem 2:- If a gravitational wave track meet Archimedean spiral, this must be table gravitational waves.

There is, $r = a + b\theta$. \leftarrow modified

r is the distance of A to B; a is the spiral length of A to B; b is the distance between the spirals.

The effect of gravitational wave on the ocean:-

The synthesis of oxygen atoms and hydrogen atoms on the earth produces liquid water. The current ocean will eventually disappear. Antarctic Arctic ice melting, need to go through the sea level rise period.

Theorem 1:-

The gravitational waves of the sun and the gravitational waves of the earth have the difference between intensity and wavelength, which determines the metallic and nonmetallic structures of the earth.[4,6,7,9,10,11]

Water has a structural Duality:-**Theorem 2:-**

Normally, the gravitational waves of the earth act more than the gravitational waves of the sun. The structure of the water is a non-metallic layered structure. Strong fluidity, the gravitational force between the water molecules is small, the intensity of the gravitational waves on the plane of the water is equal.[4,6,16]

Theorem 3:-

water in the body cut off the role of the Earth's gravitational waves. Only by the role of the sun gravitational waves. The structure of the biological water is a collection of metal tetrahedral molecules. Poor mobility, intermolecular gravity is relatively large. With the electrical difference.[12,14,15,16]

Theorem 4:-

Two hydrogen atoms in the water molecule have a special effect on the two protons in the oxygen atom. Water molecules are divided into six directions. Showing a regular hexagonal shape. So it has transparency and refraction. Snow and ice structure is not difficult to find.[4,6,]

Theorem 5:-

According to the fluidity and transparency of water, the solar gravitational waves can not produce rapid entanglement to water molecules. Only creatures can change water molecules on earth. When there is a nitrogen atom and a phosphorus atom in the water, and the water is in a relatively stable state, the single cell organism is likely to be generated and evolved.

Theorem 6:-

The water molecules in the body is a metal structure, in the role of the sun's gravitational waves, the formation of H-based and OH-based link, and with voltage. And then through the biological metabolic process, and eventually become CH₄-based, and with voltage. This is the carbonization process of water.

Theorem 7:-

The gravity of the earth is the sum of the gravitational waves.

The final process of completing the ocean into land.

Conclusion:-

This paper does not take the way from the experimental data gradually reasoning, but from the theoretical research method first gives the conclusion. After some time to give empirical results. Not only scientific research takes time, scientific understanding and promotion more time. This paper will play a reference role in the relevant research.
