Whatsaap was created by Jan koum and action in 2009 for easy communication and faster multimedia messaging. Communication through mobile phones has become easier, faster and chapter with the help of whatsapp messenger. It is cheaper when compared to the normal phone messaging. Whatsaap messenger is a cross platform mobile messenger which is being worked through internet data plan. Whatsaap provides users to send and receive Medias like, video, and images.

Whatsaap addiction is syndrome is a part of internet addiction disorder. Internet addiction disorder may be broadly defined as “the inability of individuals to control their internet use, resulting in marked distress and / or functional impairment in daily life.” One of the studies conducted in South Korea on internet addition disorder influence suicide related behavior.

The application is highly addictive and creates a great impact on regular users, and apart form that it becomes difficult to control and cure. They can do the positive and negative with whatsapp. This study focus on the prevalence of whatsapp addiction among nursing students.

Materials Method:-

This is a cross sectional descriptive study which was done among the GNM 1st and GNM 2nd student of Himalayan school of nursing Kala-Amb. Verbal consent and ethical committee clearance was obtained from the student before handing over the questionnaire. They were requested to fill the Performa with full assurance about the confidentiality and anonymity that data would be used only for scientific purpose the questionnaire was then administered to 60 students. To assess the prevalence of whatsapp addiction among nursing students of Himalayan school of nursing Kala-Amb Himachal Pradesh. Nursing Students not available during the study and not willing to participate were excluded from the study. The data is analyzed by using suitable statistical methods.

Results:-

Table 1:- frequency and percentage distribution of socio-demographic characteristics of nursing students.

	Sample Characteristics	Frequency	Percentage
1.	Age in year(17-25)		
a)	17-19	38	63.3%
b)	20-21	17	28.3%
c)	22-23	02	3.3%
d)	24-25	02	3.3%
2.	Religion		
a)	Hindu	56	93.3%
b)	Muslims	01	1.6%
c)	Sikh	01	1.6%
d)	Christian	01	1.6%
3.	Place of residence		
a)	Rural	0	0%
b)	Urban	60	100%
c)	Slums	0	0%
d)	Semi-Urban	0	0%
4.	Education		
a)	1 st year	28	47%
b)	2 nd year	30	50%
c)	3 rd year	0	3.3%
d)	4 ^{rt} year	0	0%
5.	Marital Status		
a)	Married	03	5%
b)	Unmarried	57	95%

Table 1:- In relation to age greater number of nursing students 66.3% where in the age group (17-19 years) and lesser number 3.3% in the age group of (24-25 years). Most of nursing students 93.3% was Hindu, or lesser number 1.6%

Muslims, Sikh, and Christian. Majority of nursing student was unmarried 95% and least 5% were married. According to place of residence all nursing student from urban area 100%. 60 nursing students were taken by simple randomization sampling from each GNM stream, GNM 1st year, 2nd year.

Table 2:- frequency and percentage distribution of Semi-structured questionnaire were used to assess the prevalence of whatsapp addiction among nursing students.

S.NO.	Items	Frequency	Percentage
1.	Benefits of using whatsapp?		
a)	Easy way	57	95%
b)	Improve IPR	40	66.6%
c)	Building friendship	42	70%
d)	Fast and speedily	50	83.3%
e)	Long distance communication	56	93.3%
2.	Drawback of using whatsapp?		
a)	Unwanted relations	32	53.3%
b)	Lack interaction without society	37	61.6%
c)	No face to face interaction	48	80%
d)	Ignoring people around use	30	50%
e)	Reduce attachment with parents	32	53.3%
3.	When not using whatsapp how do you feel?		
a)	Happy	39	65%
b)	Calm	35	58.3%
c)	Loneliness	27	45%
d)	Restlessness	23	38.3%
e)	Stress	15	25%
4.	Whatsapp is mainly use for?		
a)	Group	51	85%
b)	Friends	60	100%
c)	Relatives	59	98.3%
d)	Education purpose	53	88.3%
e)	General purpose	46	76.6%

Table 2:- Benefits of using whatsapp is easy way 57(95%), improve IPR 40(66.6%), building friendship 42(70%), fast and speedily 50(83.3%), and long distance communication 56(93.3%) . The Drawback of using whatsapp is unwanted relations 32(53.3%), lack interaction without society 37(61.6%), no face to face interaction 48(80%) ignoring people around use 30(50%), and reduce attachment with parents 32(53.3%). When not using how you do feel are happy 39 (65%), calm 35(58.3), loneliness 27(45%), restlessness 23(38.3%) and stress 15(25%). Whatsapp is mainly used for the group 51(85%), friends 60(100%), relatives 59(98.3%), (Education purpose 53(88.3%) and General purpose 46(76.6%).

Figure no 1:-Benefits of using whatsapp?

Figure no 2:-Drawback of using whatsapp?

Figure no 3:-When not using whatsapp how do you feel?

Figure no 4:-Whatsapp is mainly use for?

Conclusion:-

The prevalence of whatsapp addiction is high, were in more than half study group show some form of whatsapp addiction pattern. The whatsapp addiction problem among Nursing Students should gain attention and it is time to evolve a comprehensive intervention approach to promote a healthy and safe whatsapp use

Conflict Of Interest:-

There was no such conflict and bias during the study.

Source Of Finding: -

it is self-funded research study.

Ethical Clearance:-no

ethical issue exists.
