Introduction:-

The relevance of education in pre-school education, much work is involved in the involvement of children aged 3-7 in preschool education and the dedication of caregivers to their profession, primarily for self-education and self-improvement. preparation of methodical literature, increasing children's interest in learning, using physical education and using modern information technologies, radical change of educational literature for them, formation of their attitude to books.

Today in our country, SH.M. Mirziyoyev has initiated a new phase in the development of the Strategy of Action on the five priority directions of development of the Republic of Uzbekistan, adopted at his initiative and under the direct supervision. On December 29, 2016 the Decree "On measures to further improve the system of preschool education in 2017-2020" was adopted and the program was developed. This decision will strengthen the material and technical base of preschool education and provide them with qualified teaching staff. Radical improvement of the level of preparation of children for school education. An important program to address such pressing issues as creating conditions for the intellectual, aesthetic and physical development of our children Provision is provided. The Decree of the President of the Republic of Uzbekistan Sh. After all, the most important aspect of upbringing modern, mature, mature and perfect people is the education and training of preschoolers. In this area, especially after 2017, a lot of work is being done. Therefore, there is a lot of work being done to address these issues. But there are more tasks to be done in this area.

First of all, one of the important issues in this area is the involvement of children aged 3 to 7 years in preschools. it can cover up to 30-35% of its pupils, so it is necessary to increase the number and quality of pre-school institutions in the coming years.

According to Shavkat Mirziyoyev, all children under the age of 7 should be fully covered and this will take years. Secondly, it is necessary to create the conditions for the modern education of our children in existing and pre-school educational institutions. It also requires the training and upbringing of modern educators. quotas were increased. Establishment and opening of branches of the Central Universities. In this regard, the development and publication

of educational and methodological literature that meets the international standards for the training of modern cadres plays an important role.

Thirdly, it is also an important task in this area to broaden the practicality of pre-school education. This work requires a combination of theory and practice. implementation of foreign experience in accordance with the national mentality in the educational process. Because any news is old-fashioned. It develops slowly through certain conditions. We should use the achievements of our people and our nation in the course of our development.

Widespread use of modern information technology and pedagogical technologies in the education and training of pre-school teachers will increase the interest of pupils to improve their literacy skills.

What makes this technology unique is that it allows the child to create an atmosphere of self-expression. When a child is used independently, we need to explain that it is not a matter of doing a task for several children, but that all children work together.

We use interactive syllables in the learning process for the child to interact. Interactive teaching in education is to strengthen and enhance the relationship between the pupil and the teacher.

These techniques help to increase the effectiveness of the training through collaboration. They encourage children to think independently.

Fourth, five of our President's initiatives on youth education, especially the issue of reading, are a timely issue. As we all learn a lot from books, preschoolers should be interested in the book and learn from it. especially, it is expedient not only to collect fairy tales but also to publish fairy tales.

Especially beautiful books are often read by the children with interest. They are trying to put their minds and minds. It helps the child to develop oral speech. Now the child also tries to think independently. This is the basis for his interest in learning, his literacy.

In any society, the education, upbringing and education of a fully developed generation is a laborious and laborious endeavor. This hard work is a product of continuous education and upbringing. The first President of the country IA Karimov in his work "High spirituality invincible force" describes the professional activity of the teacher: "As we all know, the way to the human heart, first of all, education begins with education. So when it comes to this, not only do we remember the priceless heritage of our ancestors, but we also honor the generous efforts of another great teacher and mentor who is the closest to us as a parent.

The future of our country, the future of independent Uzbekistan, the success of reforms in the field of education depends on the educator - his teacher, his level, his willingness, dedication, education and upbringing for the young generation. connection.

This is how the first President of the Republic of Uzbekistan IA Karimov defines the essence of his teaching skills. "To be a mentor, to be a mentor, to have the highest attainment of others, to have the highest attainment, to raise the minds of others, to enjoy the enlightenment of the people, to become a true patriot and true citizen. That is, teachers who are just starting out, and experienced teachers who are in constant search, need to be aware of the processes that contribute to the teaching skills.

The ability to properly understand the external and internal world of the teacher in any pedagogical situation - Focus on proper perception of the pedagogical situation - cheerful and demanding - Ability to thoroughly assess the educational situation. - Ability to use different methods of influence in education. - thoughts and thoughts are clearly in the mind of the reader with mimic and pantomimic rhetoric to be able to convey - to study students' views on educational activities - common use of various forms of self-government. - to see and improve every conceivable trait of each child; - Not to be categorized according to students' social backgrounds, to be treated equally Teacher-educator influences children in their daily activities in co-operation and interaction with them. Every child is carefully studied, knowledge of his / her personality, abilities, pedagogical control and behavior of children. A fair assessment of work results should be able to provide timely assistance to karak.

One of the main qualities of a modern educator is his commitment to his profession, his ideological dedication, and his unwavering commitment to the profession distinguishes a teacher from other professionals. One of the most important qualities of the educator's profession is that only a person who can bring all the power and knowledge of a child's love to their future homeland can become a true educator, one of which is to respect each and every person interested in their lives.

The following types of activities conducted during the week by the educators during the formation of interest of pupils of the preparatory group of pre-school education No 19 in Termez city, Surkhandarya region:

1. Center activities, (Plate Roller);
2. Teaching a second language (Russian, English);
3. Speech (reading poems, letters);
4. mathematics (numbers, addition, drawing);
5. Art Center (painting, plasticine, application);

Physical education, such as week-long exercises, children talk about "Mother", "Homeland" "Peace" "Autumn" Lions about "Fruits" During the training, the children were divided into 4 groups and described the autumn ripe fruits and vegetables in the "Hot Potato" game. They can accurately describe their drawing. shows a high level of curiosity, enthusiasm, and childlike impatience, and that children have a strong interest in learning and learning.

When a preschool child reaches the age of six, he develops a verbal, that is, linguistic - logical thinking. By the age of seven, a child will be able to express certain orderly thoughts and make correct conclusions based on his existing knowledge. This in turn depends on the nature of education and upbringing of preschoolers.

The following exercise is responsible for the formation of interest in students of pre-school education No 24 in Termez, Surkhandarya region.

Speech lessons such as elementary math, logical thinking, drawing, literacy instruction, applications, (music), clay work, and nature classes are all set for the week.

During the lessons in the children's mass media number 24 in Termez city, Surkhandarya region, fiction books for children of 5 and 6 years old. The poems about A. Navoi, Mirzo Babur, mother, motherland and peace were told by the state symbols in beautiful action. During the training, the teacher also told about the fairy tale. It was possible to see the child's various mimic expressions, hatreds and envy when conveying his images through color pictures. During the visual arts, we were able to see in the images of the children the memories of the positive and negative images of the fairy tales told by the educator. The negative images were funnier with hair and tried to portray rental images as different as possible.

Expected results can only be achieved when a strong educator promotes the needs and forms a new quality of behavior.

It is the main task of every educator to bring up the young generation in the spirit of high ideology, to bring them into the consciousness that their nation, nation, country, and society will not be above the interests of the people, nation, country and society.

In short, the use of innovative techniques and interactive techniques in the formation of an interest in preschool education helps to further improve the quality of education. We conclude that speech culture promotes the development of speech culture, memory, and mental abilities by developing active and logical thinking of children through the use of mathematics.
