### Reviewer's Comment / Report

**Overall Assessment:**

This case report presents a rare instance of an isolated trichobezoar in the duodenum, which has not been previously documented in the literature. The study is well-organized, covering the background, case details, diagnosis, treatment, and discussion effectively. The findings contribute valuable insights to the medical community.

**Strengths:**

1. **Unique Case:** The report highlights an uncommon presentation of trichobezoar in the duodenum, making it a valuable addition to existing medical literature.
2. **Clear Structure:** The case is well-documented, with a logical flow from introduction to conclusion.
3. **Diagnostic Accuracy:** The use of CT imaging and endoscopic attempts before surgical intervention showcases a thorough diagnostic approach.

## REVIEWER'S REPORT

4. **Comprehensive Discussion:** The discussion effectively compares different treatment methods and emphasizes the importance of psychiatric care.

### Conclusion:

This case report is well-researched and provides valuable insight into a rare clinical condition. With slight refinements in clarity, citations, and formatting, it can be a strong contribution to medical literature.
