### Reviewer's Comment for Publication.

*(To be published with the manuscript in the journal)*

The study provides a fascinating and well-researched exploration of its topics, offering valuable insights that meaningfully contribute to its field. Through thorough analyses and engaging writing, it stands as a significant addition to scholarly discourse, encouraging further research in this area of interest.

### Detailed Reviewer's Report

Below are my comments:

1. The study of this nature needs to be located within a theoretical framework and this should be briefly captured in the abstract.
2. It article fails to provide any methodological orientation. Looks like the study made use of secondary data sources. The author/s should have briefly mentioned this in the abstract. Also, there is the need for the author/s to provide a section (methodology) that would explain how the information for the study was generated. I suggest the author/s consider this.
3. The references are not sufficient enough resulting to the study not having depth and sound theoretical/conceptual background – the author/s should have assembled more relevant sources for better and richer insight and background for the study. Also, a good portion of the literature is over 5 years. This is not very satisfactory for a study of this nature as there is a highly paradigm shift in discourses in this area which the author should have drawn a lot of insight from.
4. I suggest the author/s consider the above points and reverse accordingly.
