Reviewer's Comment / Report

Abstract Review: The abstract provides a clear overview of the study, outlining the research problem, methodology, and key findings. It effectively highlights the significance of post-COVID-19 complications among nursing students and their impact on academic and clinical performance. The inclusion of a reliability score for the tool used adds credibility to the methodology. The conclusion succinctly summarizes the prevalence and associations found in the study.

Strengths:

- The study addresses a pertinent issue affecting nursing students post-COVID-19, making it relevant to healthcare and academic institutions.
- A clear and structured methodology, including a description of the sample size and sampling technique, enhances the study's credibility.
- The study employs a self-structured questionnaire, ensuring a focused assessment of post-COVID-19 complications.
- The statistical analysis includes a discussion on significant associations with socio-demographic factors.

REVIEWER'S REPORT

Introduction Review: The introduction effectively sets the context for the study by discussing respiratory infections and their relevance to COVID-19. The historical perspective of COVID-19, including its emergence and global impact, is well presented. The introduction successfully transitions to the need for studying post-COVID-19 complications, particularly among nursing students.

Strengths:

- Provides a well-structured background on respiratory infections and their implications.
- Clearly establishes the significance of COVID-19 and its long-term impact on affected individuals.
- Highlights the relevance of the study within the context of nursing education and skill development.

Overall Evaluation: The study is well-organized and methodologically sound, with a clear focus on post-COVID-19 complications among nursing students. It effectively presents the problem statement, methodology, and findings. The research is relevant to both healthcare and academic sectors, contributing to a better understanding of the long-term effects of COVID-19 among student populations.

Recommendation: The study is suitable for dissemination in academic and healthcare research settings due to its structured approach and practical implications.
