Reviewer's Comment for Publication.

(To be published with the manuscript in the journal)

The reviewer is requested to provide a brief comment (3-4 lines) highlighting the significance, strengths, or key insights of the manuscript. This comment will be Displayed in the journal publication alongside with the reviewers name.

Obstructive laryngeal dyspnea refers to difficulty breathing due to a blockage or narrowing of the larynx the voice box.

Detailed Reviewer's Report

- A large supraglottic fibrolipoma is a benign, slow growing tumor composed of fat and fibrous tissue located in the area above the vocal cords.**

REVIEWER'S REPORT

- 2. These tumors are relatively rare and can cause symptoms like dysphagia, dysphonia and dyspnea due to their mass effect on surrounding structures.**
- 3. Treatment typically involves surgical removal either through an endoscopic or external approach to prevent recurrence.**
- 4. This research topic is medicinally very valued**
- 5. Informations are given very less.**
- 6. Flow chart of significant points should be given.**
- 7. In results part tables with graph needed.**
- 8. Summary part must be included.**
- 9. More references should be added.**
- 10. References should be in alphabetical order.**
- 11. Before publishing must be included above corrections mentioned.**
