### Reviewer's Comment for Publication.

#### Introduction:

The introduction provides a concise and informative overview of laryngeal fibrolipomas, their rarity, and clinical significance. The background is well explained, and the rationale for the case report is clear.

#### Case Report

The case of a 56-year-old male patient, a chronic smoker with a 20 pack-year history is presented clearly and in a structured format. It effectively highlights the patient's clinical progression, diagnostic imaging, surgical approach, and postoperative outcome. The detailed description of the intraoperative procedure and follow-up strengthens the clinical value. Including labeled images improves understanding.

#### Discussion

The discussion is comprehensive and well-supported with literature. It covers the possible conditions to compare with, scan results, surgery, and lab findings. The authors also compared their case well with similar cases.

#### Conclusion

The conclusion effectively summarizes the key learning points and emphasizes the importance of a multidisciplinary approach in diagnosing and managing supraglottic fibrolipomas.

## REVIEWER'S REPORT

Figures and Diagrams:

The CT images and intraoperative visuals are relevant and useful in supporting the case. Images should be formatted properly relevant to the article.

References:

The references cited are relevant and support the article well. Formatting of the reference should be changed according to the journal.

Overall assessment:

Minor grammar and formatting mistakes should be corrected, and the references should be properly formatted.
