Title: ARTIFICIAL INTELLIGENCE AND CYBERSECURITY THREATS: REDEFINING 1 INTERNATIONAL COOPERATION

Recommendation:
Accept as it is ....
Accept after minor revision............
Accept after major revision ....
Do not accept (*Reasons below*) ....

Reviewer Name: Dr Gulnawaz

Detailed Review Report

The manuscript presents an important and timely discussion on the impact of Artificial Intelligence (AI) across multiple sectors, including healthcare, education, business, and ethics. The work is well-structured and provides a clear overview that is accessible to a broad readership.

Strengths:

- Covers multiple dimensions of AI's impact, providing a holistic perspective.
- Language is generally clear and easy to follow, making it suitable for interdisciplinary readers.
- The conclusion successfully summarizes the major findings and emphasizes the need for balanced AI development.

Areas for Improvement:

1. **Technical Depth:** While the paper outlines applications of AI, it lacks sufficient depth in technical explanation. Adding specific examples, case studies, or data-driven evidence would strengthen the technical quality.
2. **Literature Support:** The discussion would benefit from the inclusion of more references to recent studies (2020–2025) to validate claims.
3. **Formatting and Consistency:** Some sections contain long paragraphs that could be broken down for better readability. Additionally, ensure consistency in headings and sub-headings for smooth flow.
4. **Critical Perspective:** While the manuscript emphasizes benefits, a more balanced critique of AI risks (bias, data privacy, job displacement) should be expanded with real-world examples.

Overall, the manuscript is promising and relevant for publication, but revisions are recommended to enhance its academic quality and credibility.
