Reviewer's Comment for Publication.

(To be published with the manuscript in the journal)

The reviewer is requested to provide a brief comment (3-4 lines) highlighting the significance, strengths, or key insights of the manuscript. This comment will be Displayed in the journal publication alongside with the reviewers name.

The most common cause of tardive dyskinesia is long term use of medications that block dopamine receptors, particularly antipsychotics.

Detailed Reviewer's Report

- 1. Treatment – resistant tardive syndromes including dyskinesia and dystonia, pose significant challenges due to their persistence even after discontinuation of the causative medication.**

REVIEWER'S REPORT

2. Nicotinamide adenine dinucleotide is a coenzyme central to metabolism. NAD is called a dinucleotide because it consists of two nucleotides joined through their phosphate groups.
3. Oxidative response also known as oxidative stress, refers to an imbalance between the production of reactive oxygen species and the body's ability to counteract them with antioxidants.
4. In this research topic is medically very valued one. Informations are good.
5. Where is result part with results and tables. Directly moved to discussion part.
6. Summary parts must be included.
7. Flow chart of significant points can be included
8. Some relevant pictures should be added.
9. References should be in alphabetical order.
10. After all those corrections good to publish in your journal.
