Reviewer's Comment for Publication.

General Assessment:

The manuscript addresses an increasingly urgent issue in contemporary urban studies: the challenge of balancing urban growth with environmental sustainability. By focusing on Bandar Lampung City, the study situates global debates on conservation and sustainable development within a specific local context, offering valuable insights into how community engagement, government action, and technological innovation can align to promote ecological resilience and human well-being.

Originality and Relevance:

The paper contributes to the academic and policy discourse on sustainable urban development by highlighting the role of conservation movements as active drivers of change. Its emphasis on community participation alongside governmental and technological efforts provides a holistic perspective. The alignment with the Sustainable Development Goals (SDG 11 in particular) enhances the relevance of the research for global urban sustainability agendas.

Clarity and Structure:

The manuscript is logically structured, with the abstract clearly outlining the objectives, methodology, and findings. The introduction effectively frames the problem of ecological

pressures in cities, emphasizing the transition of conservation from an auxiliary concern to a central component of urban development. The narrative is coherent and well-developed, allowing readers to follow the argument smoothly.

The study draws upon urban ecological concepts, sustainable city frameworks, and conservation theory. By situating Bandar Lampung within this framework, the manuscript illustrates how global environmental challenges manifest locally and how local initiatives can contribute to wider sustainability goals. The focus on social, political, and technological dimensions demonstrates a multidisciplinary perspective.

The findings underscore the multifaceted benefits of environmental conservation movements. They go beyond mitigating pollution and land degradation, demonstrating their capacity to foster resilient urban ecosystems, enhance residents' quality of life, and support international commitments to sustainable urban settlements. This contribution is both academically significant and practically applicable for policymakers and urban planners.

The manuscript is presented in clear and professional academic language. Terminology is consistent and appropriate for environmental studies and urban development research. The overall presentation is precise and well-articulated.

The manuscript makes a substantial contribution to the study of sustainable urban development, highlighting the transformative potential of environmental conservation movements in shaping resilient, comfortable, and sustainable cities. By drawing on the example of Bandar Lampung City, it offers both localized and globally relevant insights into the challenges and opportunities of ecological urban governance.
