### Reviewer's Comment for Publication.

*(To be published with the manuscript in the journal)*

*The reviewer is requested to provide a brief comment (3-4 lines) highlighting the significance, strengths, or key insights of the manuscript. This comment will be Displayed in the journal publication alongside with the reviewers name.*

### **Brief comment**

The paper presents an interesting overview of anxiety disorders and highlights a homeopathic approach for management. The topic is relevant and timely.

### **Detailed Reviewer's Report**

The manuscript entitled “**Anxiety Disorders and Homoeopathic Approach**” addresses a highly relevant topic in the field of mental health and complementary medicine. The paper provides an overview of anxiety disorders, their prevalence, clinical features, and discusses homeopathic remedies as an alternative treatment. The abstract is informative but it remains largely descriptive; it would benefit from highlighting the novelty and specific contribution of the article.

The introduction gives a broad historical and conceptual background, including references to Freud and WHO prevalence data, which establishes the importance of the subject. The current discussion offers a scholarly research article. The paper has a clear methodological framework, method of literature selection, analysis, and synthesis of findings.

## REVIEWER'S REPORT

The section on Hahnemann's classification and approach to mental diseases is well articulated. Similarly, the description of homeopathic remedies such as Aconitum napellus, Arsenicum album, and Ignatia amara is useful. It makes this section stronger and more scientifically valuable.

In terms of references, the list includes books, classical texts, and some online resources. They provide foundational support. The overall language of the paper is understandable. Structurally, the paper would benefit from clearer demarcation of sections such as Introduction, Review of Literature, Discussion, and Conclusion. The final summary synthesizes the findings, acknowledges limitations etc.

In conclusion, the paper highlights an important area of study and has the potential to contribute meaningfully to the discussion on complementary approaches to anxiety disorders. **My recommendation is to accept the manuscript.**

**I recommend acceptance of the paper as it is.**
