Reviewer's Comment for Publication.

Overall Evaluation

This manuscript presents a well-structured Ayurvedic perspective on the pharmacological actions of single herbs used to manage *Asrigdara* (abnormal uterine bleeding). The topic is clinically significant and relevant to both traditional and integrative medicine, offering a thoughtful alternative to hormone therapy and other conventional approaches.

Strengths

- Extensive references to classical Ayurvedic texts supported by modern pharmacological studies.
- Clear emphasis on herbs such as *Ficus racemosa*, *Symplocos racemosa*, and *Zingiber officinale*, detailing their anti-inflammatory, antispasmodic, and haemostatic properties.
- Strong contextualization of abnormal uterine bleeding with global and Indian prevalence data, enhancing the paper's relevance.

Suggestions for Minor Revision

International Journal of Advanced Research

Publisher's Name: Jana Publication and Research LLP

REVIEWER'S REPORT

1. **Organization & Flow** – Strengthen transitions between “Observation” and “Conclusion” for improved readability.
2. **Data Presentation** – The “Observation” section mentions a table of herbs with Rasa Panchaka and chemical constituents, but it seems incomplete. Include the complete data and ensure consistent formatting.
3. **Language & Style** – Conduct a careful proofread to correct minor grammar and typographical errors for better clarity and international readability.

Conclusion

The review is a valuable contribution to research on herbal management of abnormal uterine bleeding. After addressing the minor issues listed, the manuscript will be ready for publication.
