Reviewer's Comment for Publication

This is a well-organized and timely literature review highlighting the emerging role of salivary biomarkers in prosthodontics. The manuscript provides a thorough overview of salivary composition, collection methods, categories of biomarkers, and their clinical relevance in prosthodontic care. The discussion aligns with current trends in precision dentistry and presents a compelling case for integrating salivaomics into routine prosthodontic practice.

Strengths

- Comprehensive synthesis of recent research (2015–2025) with clear structure and logical flow.
- Detailed explanation of saliva's composition and its diagnostic relevance.
- Balanced discussion of clinical applications such as implant health monitoring, ridge resorption, and oral cancer surveillance.
- Forward-looking section on personalized prosthodontics.

Minor Revisions Suggested

REVIEWER'S REPORT

1. **Formatting & References:**
   - Ensure all in-text citations (e.g., superscript numerals) match the final reference list and follow the target journal's style.
   - Consider condensing long sub-sections (e.g., Saliva Composition) with summary tables for easier reference.

2. **Language & Style:**
   - A careful proofread to smooth minor grammatical issues (e.g., "the –mirror of the body‖" → "the 'mirror of the body'").
   - Maintain consistency in tense and abbreviations.

3. **Figures/Tables (if planned):**
   - Adding a schematic or flowchart showing biomarker categories and clinical applications could enhance visual appeal.

Overall, the review is scientifically sound, relevant, and well-written. With these minor edits, it will make a valuable contribution to the prosthodontic literature.
