Detailed Reviewer's Report

1. A clinical evaluation is a continuous process of analyzing clinical data to verify a medical devices safety, performance and effectiveness. It is ongoing activity that starts during development and continues throughout the devices life cycle.
2. Pathogenesis is the biological mechanism and developmental process by which a disease or disorder originates, progresses and is maintained.
3. The pathogenesis of skin disorders is a multifactorial process involving genetics, environmental factors, microbial infections, immune dysregulation, oxidative stress, and epigenetic changes, leading to inflammation, barrier dysfunction, and cellular changes that manifest as symptoms like rashes, lesions, and pigmentation changes.
4. Key words need to be added more to understand easily.
5. Review part should be given significant points in flow chart.
6. There is no results with tables and graphs.
7. Results and discussion part should be in separate.
