Significance	✓			

Reviewer Name: **Dr. S. KARTHIK**

Date: **06.10.2025**

Significance & Strength:

- Extremely uncommon.
- This condition is most common in middle-aged adult females.
- There are no known genetic connections or obvious risk factors.

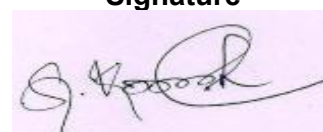

Key Insight:

- The diagnostic difficulties and differentiating considerations of a middle-aged woman's case with mammary chondrolipoma.
- Since very few occurrences have been documented, accurate diagnosis and avoidance of overtreatment are guaranteed by the identification of its distinctive istopathological features.

Additional Comments:

1. Keywords missing
2. More references can be added if possible.
3. Check the formatting of the journal format and justification of all paragraphs (alignment).
4. Suggest a Minor revision.
