Reviewer's Comment for Publication:

This manuscript presents an insightful and holistic exploration of Swedavaha Srotas and their role in fever, bridging Ayurvedic concepts with modern scientific understanding. Its interdisciplinary nature is a notable strength, contributing valuable perspectives to both traditional and contemporary medicine.

Reviewer's Comment / Report

Strengths:

- Comprehensive Literature Review:** The paper effectively combines classical Ayurvedic texts with modern scientific research, providing a holistic perspective on Swedavaha Srotas and their role in fever (Jwara).
- Interdisciplinary Approach:** The integration of traditional Ayurvedic concepts with contemporary physiology enhances the relevance and applicability of the research.
- Clear Objectives:** The study clearly states its aims, including exploring causes, symptoms, and treatment strategies, which guides the reader through the research framework.
- Detailed Explanation:** The detailed descriptions of Ayurvedic anatomy, physiology, and pathology provide valuable insights for readers unfamiliar with classical texts.

Weaknesses:

- Structural Presentation:** The organization of content, especially the sequence of sections, could be improved for better logical flow. For example, the inclusion of methods and discussion sections could be more distinct.
- Clarity and Language:** Some sentences are lengthy and complex, which may hinder understanding. Simplifying language and improving sentence structure would strengthen readability.
- Referencing:** The references lack proper formatting consistency. Standardized citation styles should be adopted and uniformly applied throughout the paper.
- Grammatical and Typographical Errors:** Minor errors, such as inconsistent tense usage and minor typographical mistakes, are present and should be addressed.
- Figures and Tables:** The manuscript would benefit from the inclusion of diagrams or tables to illustrate the anatomy, physiology, and pathophysiology described, aiding visual comprehension.

Recommendations for the Author:

- Refine language and sentence structure** to enhance clarity and readability.
- Standardize references** according to a consistent citation style (e.g., Vancouver or APA).
- Proofread thoroughly** to correct minor grammatical and typographical errors.
