Detailed Reviewer's Report

1. Human immunodeficiency virus is a virus that attacks the body's immune system. Without treatment, it can lead to AIDS.
2. A high risk population is a group of individuals with an increased likelihood of developing a specific health issue or experiencing worse health outcomes.
3. Risk can stem from genetics, lifestyle, environment or socioeconomic status.
4. Social determinants of health refer to the non medical factors that influence a persons health status and well being. These factors include the conditions in which people are born, grow, live, work and age.
5. Structural vulnerability refers to systemic issues, like poverty, discrimination, and lack of access to resources, that increase an individuals or group risk of harm, poor health or hardship.
6. This is distinct from individual or accidental vulnerability and is instead rooted in social structures, instructions, and policies that create and perpetuate inequalities.
