Significance		Good		

Reviewer Name: Dr.Sumathi

Detailed Reviewer's Report

- 1. Infiltrative mediastinal hilar pulmonary describes a medical condition where a process, often a malignancy like lung cancer, spreads and infiltrates the mediastinum hilar regions and the pulmonary tissue itself.**
- 2. It signifies a complex and advanced stage of disease where cancer or infection is no longer localized to one area but has invaded multiple structures in the chest.**
- 3. Cardiac tamponade is a life threatening condition where fluid accumulates in the pericardial sac, the thin membrane surrounding the heart.**
- 4. This accumulation of fluid compresses the heart, preventing it from properly pumping blood.**
- 5. SVC syndrome is a condition where blood flow through the superior vena cava the large vein that carries blood from the head, neck, arms, and chest back to the heart is obstructed.**
- 6. A dramatic presentation is a performance that uses acting, voice, and movement to convey a story or message.**
