Detailed Reviewer's Report

This article is based comprises a brief contents.

The report provides a detailed, structured evaluation covering:

****Executive Summary**** - Overview of the retrospective cohort study involving 30 pediatric patients treated with titanium elastic nailing (TENS) between 2018-2021, demonstrating 93.33% excellent outcomes.

****Strengths**** - Including clinical relevance, appropriate study design, well-defined criteria, standardized assessment tools (Flynn's criteria), reproducible surgical technique, and favorable outcomes with minimal complications.

****Weaknesses & Concerns**** - Identifying critical limitations such as small sample size (n=30), lack of control group, missing statistical analysis (no confidence intervals or p-values), limited functional outcome measures beyond morphological parameters, age range inconsistencies, and writing quality issues.

REVIEWER'S REPORT

****Methodological Concerns**** - Addressing potential selection bias, information bias from retrospective data collection, inadequate confounding variable control, and unclear loss-to-follow-up documentation.

****Results Evaluation**** - Analyzing demographic characteristics, fracture patterns, surgical outcomes, union times, and complication profile with appropriate literature contextualization.

****Detailed Recommendations**** - Providing specific suggestions for improving statistical rigor, methodological clarity, outcome assessment, and presentation quality.

****Overall Assessment**** - Rating the manuscript as requiring ****REVISE AND RESUBMIT**** with priority actions for achieving publication standards.

The report is formatted professionally with clear sections, tables, and actionable feedback to guide authors toward publication-ready revision.
