Significance	Excellent			

Reviewer Name: Dr. Sumathi

Detailed Reviewer's Report

1. A schwannoma is a benign tumor that develops from schwann cells, which form the protective sheath around peripheral nerves.
2. These tumors are typically slow growing and can occur anywhere in the body, with common locations including cranial nerves, spinal nerve roots, and peripheral nerves.
3. Depending on the location, they can cause symptoms like pain, numbness, tingling, and muscle weakness or affect functions like hearing and balance.
4. Ulnar digital nerve is a benign slow growing tumor that originates from the schwann cells of the ulnar digital nerve., which is the nerve running along the little finger side of the hand and into the finger.
5. This tumor can cause symptoms like pain, numbness, but it can also be painless at first.
6. Diagnosis is typically made through a physical exam, imaging like an MRI and confirmation via a biopsy after surgical removal.
7. The ulnar digital nerve for the ring finger provides sensory and motor functions to the ulnar side of the ring finger, while the median nerve provides sensation to the radial side of the ring finger.

REVIEWER'S REPORT

- 8. Specifically, the ulnar nerves dorsal digital branch supplies the ulnar side of the little finger and the adjacent sides of the little and ring fingers.**
- 9. Damage to this nerve can result in numbness weakness in the affected portion of the ring finger.**
- 10. Pictures and informations are good.**
- 11. Key words must ne included.**
- 12. Summary points must be included.**
- 13. References should be in alphabetical order**
- 14. After a small corrections good to publish in your journal.**
