Detailed Reviewer's Report

1. Eyelid reconstruction is a surgical procedure to restore the function and appearance of the eyelid after damage from trauma, skin cancer or congenital defects.
2. The method depends on the size and location of the defect and can involve techniques like direct closure for small wounds skin composite grafts or more complex flap procedures.
3. Blepharoplasty or eyelid surgery is a cosmetic or medical procedure to remove excess skin fat, and muscle from the upper and lower eyelids to create a more youthful and alert appearance.
4. It can address issues like sagging eyelids that impair vision and is performed to rejuvenate the eye area by reducing puffiness and wrinkles.
5. Hyaluronic acid fillers are injectable gels that restore volume, fill wrinkles and contour the face by using a substance naturally found in the skin.
6. They temporary reversible cosmetic treatment that provides immediate results with effects that typically last from six months to two years.
