Rating	Excel.	Good	Fair	Poor
Originality		Good		
Techn. Quality		Good		
Clarity	Excellent			
Significance	Excellent			

Reviewer Name: Dr. Sumathi

Detailed Reviewer's Report

1. A diabetic foot disease is any condition that results directly from peripheral artery disease or sensory neuropathy affecting the feet of people living with diabetes.
2. Diabetic foot conditions can be acute or chronic complications of diabetes.
3. Amputation is the surgical removal of a limb or body part due to severe injury, infection, or chronic disease like diabetes.
4. Causes include vascular disease, trauma, cancer or birth defects. Recovery involves physical and psychological adjustments, including learning to use a prosthetic limb, and may include therapy to cope with physical pain, like phantom limb pain, and emotional challenges like sadness and frustration.
5. The risk for amputation is formulated by identifying and assessing numerous clinical and lifestyles risk factors, primarily related to diabetes and peripheral artery disease.

REVIEWER'S REPORT

- 6. Clinicians use formal risk stratification systems and clinical judgement to determine a patients individual risk and guide preventive care or surgical decisions.**
- 7. Key words must be given.**
- 8. Abstract and methodology parts are awesome.**
- 9. Results part is good with tables. But need to be added graphs for tables.**
- 10. SUMMARY POINTS MUST BE GIVEN.**
- 11. Discussion part missed. It must be added.**
- 12. References should be in alphabetical order.**
- 13. After those corrections good to publish in your journal.**
