## REVIEWER'S REPORT

Manuscript No.: IJAR- 54971

Title: Hematoma of the Psoas Muscle in a Patient on Anticoagulants: Case 2 Report

### Recommendation:

Accept as it is .....

**Accept after minor revision.....**

Accept after major revision .....

Do not accept (*Reasons below*) .....

Rating	Excel.	Good	Fair	Poor
Originality		Good		
Techn. Quality		Good		
Clarity		Good		
Significance		Good		

Reviewer Name: Dr. Sumathi

### *Detailed Reviewer's Report*

- 1. A hematoma is a collection of blood outside of blood vessels, caused by a ruptured vessel from trauma, surgery or other injury. Symptoms vary from a simple bruise to more severe pain, swelling and limited movement with the severity depending on the location and size of the hematoma.**
- 2. While smaller hematomas often heal with home care like rest and ice, larger or deep hematomas, particularly those in the brain, can be serious and require medical attention, including potential surgical drainage.**
- 3. Anticoagulants are medications that prevent blood clots from forming, growing or traveling in the blood stream by slowing down the clotting process.**
- 4. Also known as blood thinners, they are prescribed to treat and prevent conditions like strokes, heart attacks and pulmonary embolisms.**
- 5. The psoas muscles are a pair of core abdominal muscles that originate in the lower back, pass through the pelvis and terminate in the groin.**

## REVIEWER'S REPORT

6. Key words must be needed.
7. Informations are good but very shortly given.
8. There is no tables with results and graphs in result part. It should be given.
9. Summary points can be added.
10. Relevant pictures can be given.
11. References should be in alphabetical order.
12. After those corrections good to publish in your journal.
