

## REVIEWER'S REPORT

Manuscript No: IJAR-55011

**Title: EFFECTIVENESS OF WARM COMPRESSION ON TEAR PRODUCTION AMONG DRY EYE SYNDROME AND ITS PREVALENCE: A NARRATIVE REVIEW**

### Recommendation:

Accept as it is .....

**Accept after minor revision.....**

Accept after major revision .....

Do not accept (*Reasons below*) .....

Rating	Excel.	Good	Fair	Poor
Originality		Good		
Techn. Quality	Excellent			
Clarity	Excellent			
Significance	Excellent			

Reviewer Name: Dr. Sumathi

### *Detailed Reviewer's Report*

1. Dry eye syndrome is a common condition where the eyes do not produce enough quality tears to properly lubricate the eyes surface, leading to symptoms like stinging, burning, redness, blurred vision, and a gritty feeling.
2. Causes including aging, certain medications, prolonged screen time, and environmental factors like wind and dry climates. Treatments range from artificial tears and lubricating gels to prescription drops and other medical interventions.
3. A warm compress is a cloth soaked in warm water or a dry pack that provides heat to a specific area of the body. It is used to treat conditions like dry eyes, styes, and sore muscles by increasing blood flow, relaxing muscles and helping to unclog oil glands.
4. Prevalence is the proportion of a population that has a specific disease or condition at a particular time. It is a measure of disease burden and is calculated by dividing the number of existing cases by the total population size.
