Rating	Excel.	Good	Fair	Poor
Originality		Good		
Techn. Quality		Good		
Clarity	Excellent			
Significance	Excellent			

Reviewer Name: Dr. Sumathi

Detailed Reviewer's Report

- 1. A cement allergy also known as allergic contact dermatitis is caused by a sensitivity to hexavalent chromium, a component of cement. Symptoms include itchy, red, and swollen skin, which can develop into blisters or scaling. It can also be triggered by other components in bone cement.**
- 2. Panchavalkadi thailam is a traditional ayurvedic herbal oil, famous for treating skin ailments like eczema, dermatitis, herpes, ulcers, and infected wounds, using the barks of five specific trees in a coconut or sesame oil base, known for its cleansing, anti inflammatory, and healing properties.**
- 3. It balances pitta and kapha doshas, soothes itching, reduce inflammation and promotes skin regulation.**
- 4. A clinical study or clinical trial is a research study testing new medical approaches in people to see if they are safe and effective for improving health, often involving phases to check safety, dosage, effectiveness, and long term effects, with participants potentially receiving interventions and being monitored by healthcare professionals all under strict guidelines.**
