### Reviewer's Comment for Publication.

This article reports a rare neonatal case of encysted meconium peritonitis diagnosed on prenatal ultrasound and confirmed after birth by imaging and surgery. It highlights the importance of antenatal imaging for early diagnosis and timely surgical management to improve outcome.

### Strength:

1. Rare and clinically important case
2. Clear prenatal, postnatal imaging and surgical correlation
3. Good explanation of diagnosis and management
4. Relevant and updated references

### Weakness:

1. Single case report, limited generalization
2. Language and grammar need minor correction
3. Figures could be better labeled and referenced in text

### Overall assessment:

The article is informative and well-structured. It adds value to medical literature by emphasizing the role of prenatal imaging in rare neonatal conditions. Suitable for publication after minor revisions.

**Recommendation:** Manuscript accepted for publication after minor corrections.
