Detailed Reviewer's Report

1. **Epidemiology** is a scientific discipline defined as the study of the distribution and determinants of health related states or events in specified populations. The ultimate goal is to apply this knowledge to the control and prevention of health problems.
2. **Therapeutics** refers to the branch of medicine focused on treating and preventing disease, alleviating symptoms, and promoting healing, encompassing everything from drugs and surgery to lifestyle changes like diet, exercise and counseling.
3. **Aiming to restore health or manage conditions using remedies and interventions.** It is about the application of treatments, whether they are medical procedures, medications or activities that have a positive impact, like spending time in nature for relaxation.
4. **A retrospective** is a structured meeting to look back at past work to reflect on what went well, what did not and identify actionable improvements for the future, fostering continuous learning and growth, especially common in agile development for improving processes and collaboration.
