Detailed Reviewer's Report

1. Perception is the brain's process of selecting, organizing and interpreting sensory information to understand the world, turning raw data into meaningful experiences, beliefs and a coherent picture of reality, heavily influenced by our unique memories, expectations, and attention.
2. It is how we make sense of the environment but it is subjective, meaning two people can perceive the same event differently.
3. Guideline utilization refers to the adoption and application of established recommendations to guide decisions and actions, primarily in healthcare to improve quality, consistency and outcomes, though challenges like provider time, patient factors, and resource limits often hinder full implementation, requiring strategies to boost awareness, commitment and integration into daily practice.
4. Osteoporosis management focuses on preventing fractures through lifestyle changes fall prevention and sometimes medications like

REVIEWER'S REPORT

bisphosphonates or bone building agents, all aimed at slowing bone loss, improving bone density, and maintaining strength.

- 5. Key elements include adequate calcium and vitamin weight bearing strength training and specific drug therapies for higher risk individuals often combined with physical therapy.**
- 6. Key words must be given.**
- 7. Review and result parts are good.**
- 8. Discussion part is not clear.**
- 9. Summary points needed.**
- 10. Results part should give graphs for tables.**
- 11. References should be in alphabetical order.**
- 12. After those corrections good to publish in your journal.**
