Detailed Reviewer's Report

This study presents the **VDEDL1 Project User Interface**, a management system designed for the exchange of exemplary projects by civil servants. The project focuses on leveraging evolutionary interactive objects, digital transformation, lifelong learning, and AI to support project teams in promoting sustainable development. Using the VLEDL platform (demo.vledl1.org), the study provides a practical implementation for sharing ideas, samples, and best practices among project teams. The research highlights how the VDEDL1 system facilitates understanding of opportunities, challenges, and issues in the AI era while applying the conceptual “arrow theory” for sustainable development in education. The project includes both a mobile application and a website to enable practical validation, collaboration, and dissemination of effective solutions, demonstrating the potential of technology-driven tools to enhance knowledge exchange and project management in civil service contexts.
