Detailed Reviewer's Report

This manuscript provides a valuable empirical assessment of Moringa farming profitability in Agadez, addressing an under-researched context. The study's methodological approach combining survey data with profitability indicators (gross margin, net margin, value added, rate of return) is appropriate and yields credible findings, notably a 92.7% rate of return demonstrating clear economic viability. However, minor revisions are required. First, several typographical errors and inconsistent terminology appear throughout (e.g., "Noise Product" for "Gross Product," inconsistent use of "moringa"/"Moringa," "Amortization" formula formatting). Second, Table 3's operating account shows an imbalance (total costs plus operating profit do not precisely equal total products), requiring verification. Third, the sampling description would benefit from clarification: the text states 25% of 459 producers yields 115 respondents, which is correct, but the table sums to 115 across sites this alignment should be explicitly stated. Fourth, the discussion compares findings to other Niger studies effectively but could briefly acknowledge limitations (e.g., single-year data, self-reported inputs). Finally, the conclusion reiterates results appropriately but could be condensed. These revisions are straightforward and do not alter the paper's substantive contributions. I recommend minor revision.
