Rating	Excel.	Good	Fair	Poor
Originality		Good		
Techn. Quality	Excellent			
Clarity		Good		
Significance	Excellent			

Reviewer Name: Dr. Sumathi

### *Detailed Reviewer's Report*

- 1. Central serous chorioretinopathy (CSCR or CSC) is a condition where fluid builds up under the retina, causing a blister-like detachment and temporary or chronic central vision impairment. Most commonly affecting men aged 25–50, it often presents with blurred or distorted vision (metamorphopsia). While typically self-resolving, it can recur or become chronic.**
- 2. Personality acts as a stable framework of thought, emotion, and behavior that defines how individuals perceive, interact with, and navigate their environment. It shapes personal success, relationships, health, and career choices by influencing how people respond to situations. Personality helps predict, manage, and understand behavioral patterns.**
- 3. Purpose anxiety is the stress, frustration, and insecurity arising from the intense pressure to define, find, or achieve a specific "life purpose." Affecting up to 91% of people, it often stems from the belief that one must discover a single, perfect calling, leading to anxiety,, comparison traps, and job-hopping. It is a modern**

**REVIEWER'S REPORT**

phenomenon driven by a, societal pressure to live a deeply meaningful life.

4. Depression is thought to function as an evolutionary, protective mechanism designed to help individuals survive, conserve energy, and address complex, high-stakes problems by forcing a withdrawal from stressful situations. It acts as a "guardrail" or signal that life changes are required, encouraging introspection to reevaluate personal goals or social relationships.
5. The psychological profile of patients with central serous chorioretinopathy (CSC) is often characterized by high levels of stress, anxiety, and a Type A personality—defined by competitiveness, impatience, and impulsiveness. Studies indicate these individuals may exhibit increased aggressiveness, emotional instability, and a tendency to manage stress through ineffective, high-pressure coping strategies.
6. Key words must be given.
7. Result part for tables graphs or pie chart can be added.
8. Summary points also be added.
9. References should be in alphabetical order.
10. After those changes good to publish in your journal.
