Abstract

The present work proposes a system of assortment of healing material in the Central Equipment and Sterilization of the Community Hospital of Hopelchén, Campeche; starting with the use of input parameters (demand and costs), the analysis to determine how much and when to request consumption material. As well as assess the orders based on your weekly demand. This will be reflected in the improvement of the delivery-reception system, which impacts directly in all areas of the Hospital, thus avoiding serious problems such as shortages, ant theft, and reduction of expenses for excessive and untimely purchases, Expired products and shrinkage, among others. Likewise, the training of personnel in charge of the Central Equipment and Sterilization is considered. The aforementioned, will lead to a solution to a major problem of an economic and public nature, which is to avoid transferring the users belonging to this hospital to the General Hospital of the City of Campeche, for not having the necessary supplies in time and shape. The proposal is necessary, since as a hospital our reason for being is to provide health and well-being to our users, who demand good service and that this is provided with quality and warmth.

Introduction:-

The present work proposes a system of assortment of healing material in the Central Equipment and Sterilization of the Community Hospital of Hopelchén, Campeche; starting with the use of input parameters (demand and costs), the analysis to determine how much and when to request consumption material.

As well as assess the orders based on your weekly demand. This will be reflected in the improvement of the delivery-reception system, which impacts directly in all areas of the Hospital, thus avoiding serious problems such as shortages, ant theft, and reduction of expenses for excessive and untimely purchases, Expired products and shrinkage, among others.

Likewise, the training of personnel in charge of the Central Equipment and Sterilization is considered.

The aforementioned, will lead to a solution to a major problem of an economic and public nature, which is to avoid transferring the users belonging to this hospital to the General Hospital of the City of Campeche, for not having the necessary supplies in time and shape. The proposal is necessary, since as a hospital our reason for being is to

provide health and well-being to our users, who demand good service and that this is provided with quality and warmth.
