Introduction:-

The WorldHealthOrganization (WHO) has analyzed and categorized the different forms of occurring through all stages of life from before birth to old age. Domestic violence(also named domestic abuse or family violence)is violence or other abuse in a domestic setting, such as in marriage or cohabitation .In its broadest sense, domestic violence also involves violence against children, teenagers, parents ,or the elderly .It takes multiple forms, including physical ,verbal, emotional, economic, religious ,reproductive ,and sexual abuse, which Can range from subtle, coercive forms to marital rape and to violent physical abuse such as choking, beating, female genital mutilation, and acid throwing that results in disfigurement or death. Domestic murders include stoning, bride burning,honor killing, and dowry death (which sometimes involve non-cohabitating family members).The standard domestic violence safety assessment tool (DVSAT) is used to assess the womens affected with the domestic violence.

Statement Of Problem:

A Study To Assess The Knowledge On Prevention Of Domestic Violence Among Women At Selected Area, Puducherry.

Objectives Of Study:-

1. To asses the level of knowledge on prevention of domestic violence among women
2. Toassociate the knowledge on prevention among women with theirselected demographic variables

Corresponding Author:- M. Vishnu
Address:- Department of Mental Health Nursing.

Methodology:-

The research approach used for this study was quantitative research approach. A descriptive research design was used to assess the knowledge on prevention among women with domestic violence at kalitheerthalkuppam, Puducherry. By using purposive sampling technique 30 samples was selected for the present study. The period of data collection was two week. The tool consists of demographic data, self made questionstool. The outcome of the study was evaluated by using descriptive and inferential statistics.

Results:-

The major findings of the study were;

Table 1:- Frequency and percentage wise distribution of demographic variables amongwomen. (N=30)

SL. NO	DEMOGRAPHIC VARIABLES	FREQUENCY (N)	PERCENTAGE (%)
1	Age of women

Association between the level of knowledge on prevention among women with their selected demographic variables. The chi square reveals that it is statistically association with Place of living, Number of children alive and Education status of the husband, suffered from different forms of domestic violence belongs to significant $p < 0.05$, others are belongs to non-significance.

Recommendations:-

The study can do at the large number of samples.

1. The study can done by using other methods
2. The study can be implemented at the various states of India.

Conclusion:-

A study to assess the knowledge on prevention of domestic violence among women at selected area kalitheerthalkuppam Puducherry. The findings of the study revealed that Out of 30 samples, level of knowledge on prevention of domestic violence among womens. Majority of the womens 25 (83.3%) had inadequate level of knowledge, and 5(16.7%) had adequate level of knowledge and the mean and standard deviation level of knowledge on prevention of domestic violence among womens is (3.60+1.958) respectively.
